EARTH RESISTANCE TESTERS

The KPS earth meters are professional instruments that allow the resistance of earthing to be checked using 2 or 3-pole methods according to the European standard EN61557-5.

In addition, these equipments allow the preliminary voltage verification of the grounding, verifying that there are no dangerous voltages for the user.

On the other hand the clamp-on KPS TLP100 is and stake-less ground tester which allows a direct measurement avoiding cable connections and saving time

AUTOMATIC RANGE

The main advantage of using AUTO ranging multimeters is the simplicity. It is much easier for an average user to use auto ranging than the manual alternative.

Moreover All multimeters with this feature are capable of providing more accurate data considering the fact they will automatically adjust and choose the correct type of measurement and scale

Moreover using the SMART functionality when you are measuring resistance, voltage or anything else, the multimeter will automatically detect what you try to measure and show you the correct value. As a user, you don't have to adjust anything and the entire process will be completed automatically.

THERMOMETERS

Temperature is a parameter that allows us to verify the correct operation of a component. Hence, temperature measurement is very useful in various applications such as electrical installations, to check overloads or overheating of the elements of a circuit, or in construction, to detect thermal bridges.

With KPS models, measurements can be made contactless using the infrared technology or through thermocouples in contact with the surface of the tested object.
